★ENTRY POINT — FIRST LAUNCH

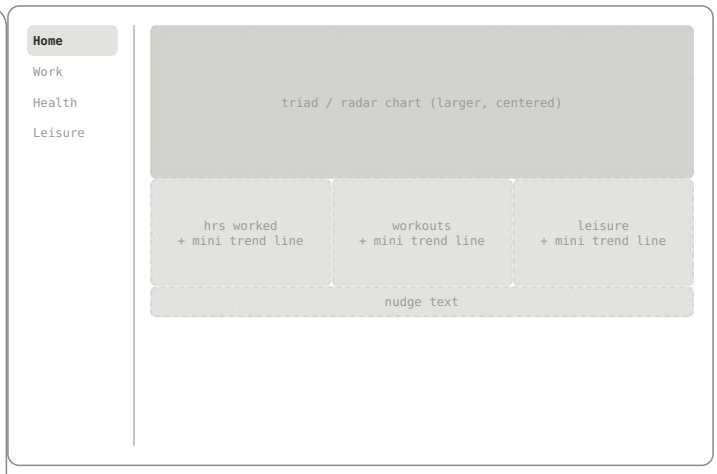

01 · DASHBOARD (HOME)

entry point

PHONE · 390PX

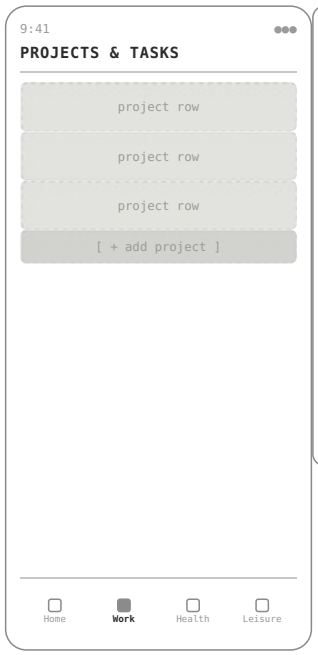

DESKTOP · 1280PX

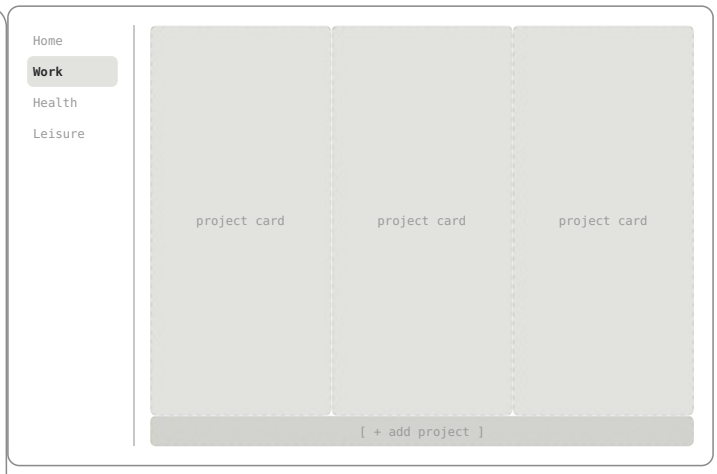

What stacks: on phone, the 3 stat cards and the "currently enjoying" shelf stack vertically under the chart and bottom nav replaces the side nav. On desktop, the same 3 stat cards sit in one row beside a larger chart, side nav replaces bottom nav, and each stat card gains a small trend line that doesn't fit on phone.

02 · WORK

PHONE · 390PX

DESKTOP · 1280PX

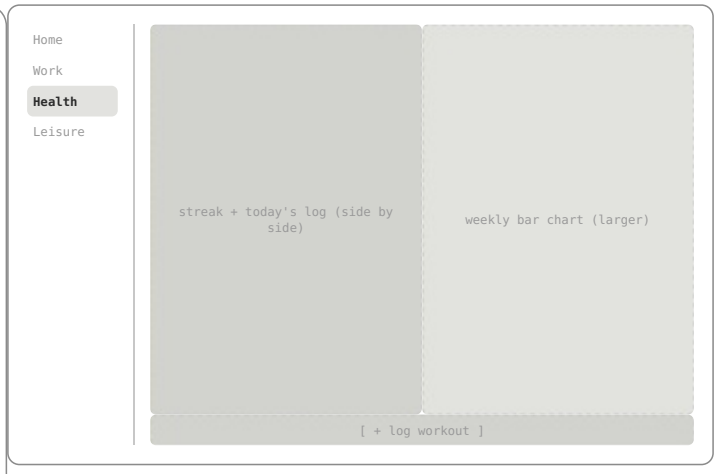

What stacks: phone shows a single-column list of project rows; desktop reflows the same data into a 3-column card grid, since the extra width is otherwise wasted on a single narrow list.

03 · HEALTH

PHONE · 390PX

DESKTOP · 1280PX

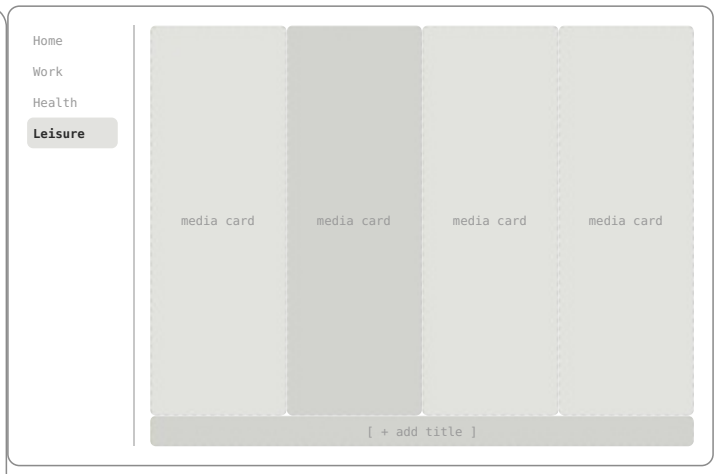

What stacks: streak counter, today's log, and the chart stack vertically on phone; on desktop the streak/log pair sits beside a wider chart in a 2-column layout.

04 · LEISURE

PHONE · 390PX

DESKTOP · 1280PX

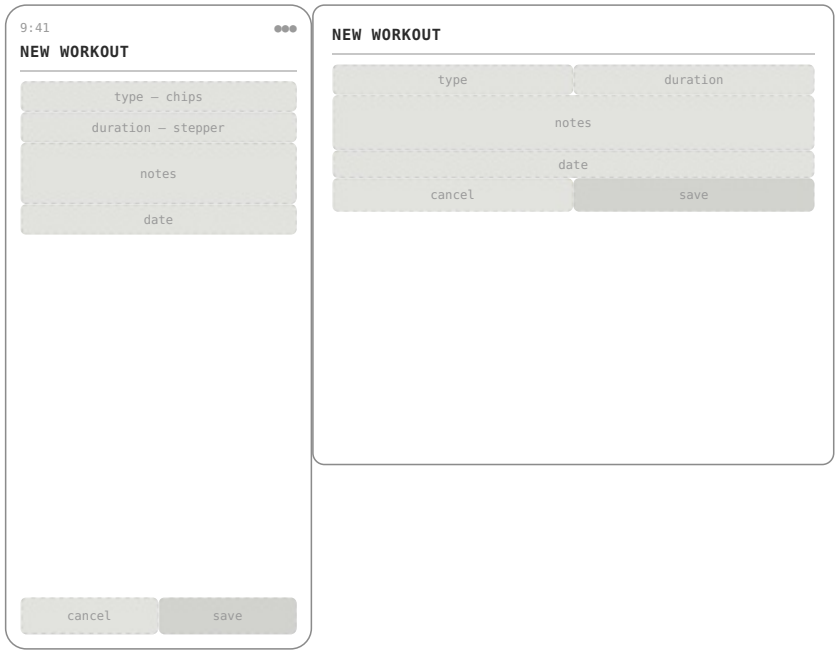

What stacks: phone shows media cards in a single scrolling column below the status filter row; desktop reflows the same cards into a 4-wide grid, more like a shelf.

05 · ADD ENTRY (SHARED MODAL)

PHONE · 390PX

DESKTOP · 1280PX (CENTERED DIALOG, NOT FULL-WIDTH)

What stacks: on phone this is a full-screen sheet with fields stacked in one column. On desktop it becomes a fixed-width centered dialog (not full width) with type/duration paired side by side — same fields, same order, different container. Same shape is reused for Work session, Workout, and Media entry; only the field set changes.
